

DELEGATION OF AUTHORITY

Allow external users to manage their own organisation's user identities and delegate roles with ease

MOST ORGANISATIONS UTILISE A NETWORK OF SERVICE PROVIDERS AS PART OF THEIR STANDARD OPERATIONS. Each provider needs to be given authority to act with clear boundaries of execution and access to protected resources.

With out-of-the-box self-service workflows, you can outsource the identity and authorisation management to your external and internal users, creating considerable cost savings.

EXTERNAL USERS CAN MANAGE THEIR OWN ORGANISATIONS' (OR FAMILY'S) USER IDENTITIES WITH THE ABILITY TO CREATE NEW GROUPS, AUTHORISE NEW ADMINISTRATORS, INVITE NEW USERS AND DELEGATE ROLES FOR EFFECTIVE SERVICE APPLICATION MANAGEMENT.

IMPLEMENT A MULTI-TIER DELEGATED ADMIN SYSTEM THAT SUPPORTS BOTH INDIVIDUALS AND ORGANISATIONS AS SOURCES AND TARGETS FOR THE DELEGATIONS.

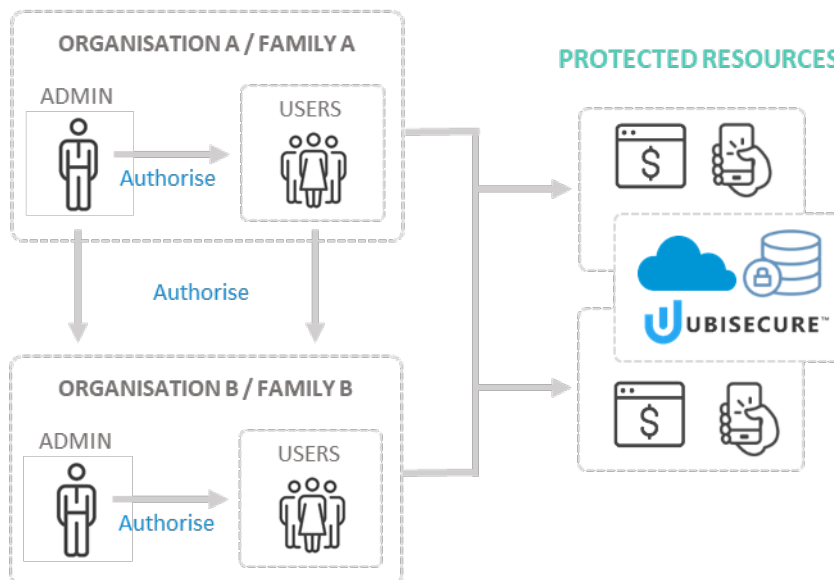

Utilise self-care capabilities and restricted onward-delegation capabilities to move overheads out of the organisation.

The UbiSecure Identity Platform provides multi-tier delegation supporting all combinations of individual and organisational assignments.

Rich self-service allows onward delegation with rights restrictions to other entities with no required involvement from the originating requestor.

The model extends well to family access to digital services, supporting parental control and management of family members subscriptions, including legacy planning..

CUSTOMERS/PARTNERS/CONTRACTORS

DELEGATED ADMIN AS A FORM OF ELECTRONIC POWER OF ATTORNEY

There are cases where external users may need access to your internal applications. For example, you might have contractors or consultants that are working for your organisation. You might wish to give them right to act on behalf of you in certain use cases. In these cases, the Ubisecure Identity Platform can be used to grant these external users the access with right privileges. This allows them to use delegation of authority / electronic power of attorney and taking away then need of managing these contracts manually.

CONTRACT BASED

The Ubisecure Identity Platform ensures that your external users won't "overstay their welcome". As they are external users, they have a contract with you, the user privileges can be tied to the contract validity. Once the contract expires, access privileges are automatically revoked. This improves security, especially in cases where these external users might have had high privileged access for e.g. server maintenance.

SIGNIFICANT COST REDUCTION

Allow external organisations to manage their accounts and empower them to accomplish more. Rich self service allows onward delegation with rights restrictions to other entities with no required involvement from the originating requestor. Tiered delegated administration lets your external users manage their organisations' identities, create new ones, invite others, authorise employees etc. This reduces the need to rely on labour intensive operations and creates cost savings.

Delegation of Authority will allow your external users to manage their own organisation's (or family's) user identities and to delegate roles with ease.

We can help you get started with Delegation of Authority - visit www.ubisecure.com or [talk to us](#) today.

About Ubisecure Inc

Founded in 2002, Ubisecure is a pioneering b2b and b2c Identity Services software and cloud services provider dedicated to enabling the true potential of digital business. Ubisecure's Identity Platform comprises of Customer Identity & Access Management (CIAM) and Identity-as-a-Service (IDaaS) solutions that allow businesses to put the customer's identity at the beginning of their journey to create a seamless, secure experience across digital services and devices. Uniquely, the Identity Platform also connects digital services and Identity Providers such as social networks, mobile networks, banks and Governments, to allow Service Providers to benefit from the rich, verified identities to streamline login, registration and customer engagement while improving privacy and consent around personal data sharing. Ubisecure is headquartered in Finland, with offices in the UK and Sweden, and works through a network of local and global system integrator partners.
